

What Is Keder?

Keder consists of two key parts: a cord and a fabric. The cord is made of extruded PVC and is then wrapped in a keder fabric. Our keder fabrics are designed with exposed fibers to allow our keder to more-easily slide into the keder rail. The flap of the keder can then be sewn to your material, or welded by heating the inner-lining of the keder.

To select the correct keder size, start by measuring the inside diameter of your keder rail or track. The diameter of your keder's cord should be 2-3 mm. smaller than your rail. For best results, ensure the keder is large enough to not pull through the rail's opening but is not too tight within the rail. When replacing keder, measure the outside diameter of your old keder's cord.

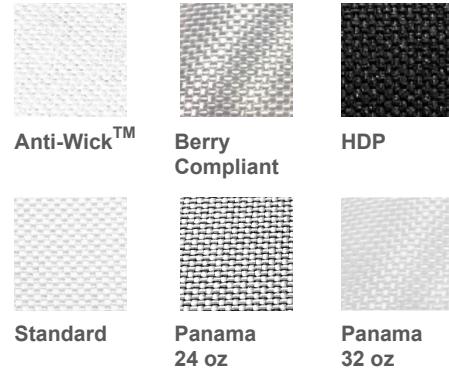

Keder Cord Sizes

Our color-coded Keder Cord system makes selecting the right keder easy. The figure below shows the inner Keder Cord sizes.

Keder Fabric Types

Anti-Wick™	Features a unique weave that wicks away water (25 oz.)
Berry Compliant	Made in the U.S., Ideal for government projects (19 oz.)
HDP	High Density Polyester (HDP), low friction material (11 oz.)
Standard	Durable, reliable fabric that is translucent (15 oz.)
Panama	Tough fabric with a coating that blocks out light (19 oz.)
24 oz. Panama	Heavy, silver panama fabric that blocks out light (24 oz.)
32 oz. Panama	Heavy, white/white panama fabric that blocks out light (32 oz.)

Choose Keder Solutions

Keder Solutions is a worldwide, leading manufacturer of keder and fabric connection systems. With more than 100 years of combined experience, our team delivers purpose-driven and precise products, dependable inventory, and exceptional customer service. Our products are manufactured with consistent quality and fast turnaround. Through our in-house extrusion capabilities, we create custom solutions that meet exact specifications with lower costs and shorter lead times.

Keder Flap Configurations

We offer custom manufacturing for all five of the configurations of keder flaps we make in-house. Our keder can also be fully-bonded, a process that welds the keder fabric to its cord from all sides, allowing it to endure wear significantly longer than our original keder.

Single Flap

Single Flap Keder has a single-side flap that can be sewn or welded to the fabric or material.

Double Flap

Double Flap Keder has two flaps that sandwich the fabric, then all three layers are sewn or welded together.

Welded Flap

Welded Flap Keder has two flaps welded together, to create a stronger single flap to sew the fabric or material to.

Repair Keder

Repair Flap Keder has a larger weld size and free flap to accommodate for damaged fabric/material for repair.

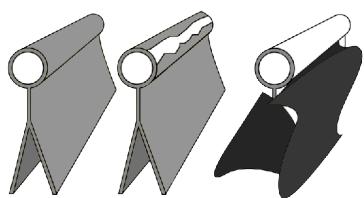

Double Keder

Double Keder has two keder PVC cords, welded in keder fabric, which can then connect two keder rails together.

Benefits of Fully-Bonded Keder

FULLY-BONDED KEDER

EVEN IF CUT,
FULLY-BONDED
KEDER ADHERES

CORD NOT FULLY-
BONDED, COMES
LOOSE OVER TIME

Keder Customizations

If you are not finding what you need, we are ready to create custom orders including a variety of sizes, specifications, fabrics and features.
